

DOUBLE ACTING PNEUMATIC SWING ACTUATORS SERIES ATM

STRÁNSKÝ A PETRŽÍK

Swing actuators of the ATM series are mainly intended for the control of fittings and valves. The swing movement is ensured by a pair of toothed combs with pistons. The advantage is a constant torque in the range of the entire swinging movement. The actuators have a fitting connection according to ISO

5211 and DIN 3337. The drive is prepared for switchboards and position sensors with connection according to NAMUR VDI/VDE 3845, air can be connected directly to the threaded holes.

Working pressure	0,6 MPa
Min. pressure	0,2 MPa
Max. pressure	0,8 MPa
Temp. range	-20°C to +80°C *
End position regulation	±4°
Working medium	modified compressed air

*) values for temp. range B

The swing direction is standard to the right (clockwise). If you require the opposite swing direction, please contact our technical department.

Limit switches can be found on page 3-10

Construction / materials

- body: hard anodized extruded aluminum alloy, honed bore
- pistons: Aluminum casting or steel casting
- pinion and cam: steel
- caps: Aluminium casting
- seal: NBR, or FPM or silicone
- fasteners: stainless steel
- position indicator: plastic

Actuator sizing

The recommended safety factor for double-acting swing actuator is 20 to 30% under normal conditions. Example of determining the size of the drive:

The required torque of the fitting is 100 Nm, the torque increased by the safety factor is 100 + 30% of 100 = 130 Nm. At an inlet pressure of 0.5 MPa, it is therefore advisable to choose the ZG-ATM105 actuator.

Notice

The torque caused by the drive must not be greater than the maximum permissible torque specified in ISO 5211 for the specific size of the mounting flange.
